## Pulstar p100 - Pulsed CO, Industrial Laser

## **Outline and Mounting:**

## **Typical Applications:**

High Speed Textile/Leather Cutting Systems: Typically used with a Galvo scan head, these systems can process a variety of fabrics, foams and leathers used in the garment industry. By nature these materials can char easily when cut, but this can be greatly reduced by using a pulsed laser to more efficiently deliver the energy-providing cleaner, sharper cuts and better results.

Converting: With peak pulsed power, the p100 is ideal for high-speed processing in the flexible and rigid packaging markets; and the optimal power stability is ideal for consistent precision cutting of label materials.

These are only examples of potential uses for the Pulstar p100.

Contact your Synrad Representative to determine the best laser for your applications.
